                                                                                                                                                                                                                                                                                                                                                                              the producte, Anytonic share, twenputchile transmembrate antigenous the projectional anti-STRAP-1 N-terminus antibodies in sheep. The call instance were used to probe western blots of cell lysates from the antibodies were used to probe western blots of cell lysates from the prostate and non-prostate cancer cell lines, and in immunchistochemical analysis of STRAP-1 expression. STRAP-1 is the prototype cannot be strated and non-prostate cancer cell lines, and in immunchistochemical cannot be supposed to the strate the structural conservation, but which show the structural to the strate of the strate prototype calls in normal human tissues. Structurally, STRAP-1 is thought to be a type life membrane protein and is expressed predominantly in prostate and the strate protein characterised by six transmembrane domains and to intracellular N and C-termini, suggesting that it folds in a "serpentine" manner into three extracellular and two intracellular loops. STRAP-1 manner into three extracellular and two intracellular loops. STRAP-1 manner into three extracellular and two intracellular loops. STRAP-1 manner into three extracellular and two intracellular loops. STRAP-1 manner into three extracellular and two intracellular loops. CTRAP-1 manner into three extracellular and two intracellular loops. STRAP-1 manner into the strate of the STRAP protein is not known. They may be iden charged by certain into charges in not known. They may be used for detection, prognosis, and monitoring of cancers (or susceptibility to cancer), as therapeutic coinfibitions of to target therapeutic sendence in thibitors of strap expression and for therapeutic coinfibitions of strap expression and for therapeutic coinfibitions of strap expression and for therapeutic coinfibitions are expressed on the scall surface, they are expressed mainly of protein and the effects on other tissues.
                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      epithelial antigen of the prostate) cancers, useful for detecting and treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Saffran DC,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mitchell SC,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Faris M;
```

The present invention relates to human six transmembrane spithelial surface serpentine transmembrane antigens. STEAP is a member of cell surface serpentine transmembrane antigens. STEAP gene is used in gene therapy. Inhibiting the development or progression of a cancer (eg. transmembrane antigens) and paceratic expressing STEAP or inhibiting growth or killing cells expressing STEAP in a patient. Treating to comprises administering a vaccine composition to the patient. Treating capture in a patient with a cancer that expresses STEAP or inhibiting growth or killing cells expressing STEAP, comprises administering to the patient at vector encoding single chain monoclonal antibody that comprises the vector encoding single chain monoclonal antibody that comprises the transmission of the heavy and light chains of the monoclonal antibody that comprises the single chain monoclonal antibody coding sequence to the cancer cells and the encoded single chain monoclonal antibody coding sequence to the cancer cells and the encoded single chain monoclonal antibody is expressed.

Comprises the present sequence is an immunogenic peptide of STEAP-1. STEAP-1 gene is located on chromosome 7p2.3. This peptide is used to immunise sheep for the generation of sheep polyclonal antibodies towards the amino-terminus of anti-STEAP-1.

Sequence 15 AA;

sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proteins obtained may have cytokine activity, cell proteins obtained may have cytokine activity, cell productive hormone activity, tissue growth regulating activity, responderive hormone regulating activity, chemotactic Activity, themostatic and thrombolytic activity, receptor! Igand activity, self-lammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences of the mucleic acids encoding the signal peptide can be used for directing extracellular secretion of a gipal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a directing extracellular secretion of a polypeptide or the insertion of a

Complia sequence expresents a novel human protein. STRAP-1 (serpentise curtansambrane autign of the proteins. STRAP-1 is the proteyne member of the STRAP family of proteins (ANSS194-YES197) which control is the protein strain of the proteins (ANSS194-YES197) which control is a strain of the protein strain of the protein strain of the protein strain of the strain o
gap-junction proteins (from immunohidrochemical staining) STRAP-1 and STRAP-2 are cell-surface tumour sattigens, immunisation with a STRAP protein induces callular and humoral immune responses againty STRAP proteins be used to identify specific-binding agents, to produce anticancer vaccines and to generate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              specific antibodies. The antibodies may be used for detection, prognosis, and monitoring of cancers (or susceptibility to cancer), as therapeutic inhibitors or to target therapeutic agents to their site of action. STRAP muleic acids may be used for recombinant protein production, as disgnostic and prognostic respects, for identifying STRAP-expressing calls for acreening inhibitors of STRAP expression, and for therapeutic modulation/inhibition of STRAP expression, since high levels of STRAP expression in the sell proteins are expressed on the cell surface, they are selly targeted by systemically administrated agents, and because they are expressed mainly on prosteric epithelial cells, agents targetted to them should have minimal side effects on other tissues.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cancer, especially prostate cancer. The polypoptides, polynucleotides and the antigen-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting the development of cancer especially prostate cancer. Compositions comprising the polynucleotide and/or polypoptide are useful for stimulating an immune response, and for treating cancer. The oligomucleotide is useful for detecting cancer, The present sequence is a prostate specific
                                                                                                                                                                                                                                                                                                                                     Tang YT,
Zhao QA,
The invention relates to polymucleotides (AAS3145-AAS3415) and the encoded polymeptides (AAM3312-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymerides are useful in gene therapy, vaccines or peptide therapy. The polymeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haemacopolesis regulating e.g.
                                                                                                                                                                                                                                                        WPI; 2001-476283/51.

                                      cancer-associated transcript in a cell from a patient. The method comprises contacting a biological semple from the patient with properties contecting a biological semple from the patient with the properties cancer-associated polymuclaorides (designated polymuclaorides (designated polymuclaorides designated and accordance associated polymuclaorides of various corganisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for disgnosing and tracting prostate cancer-associated genes are useful for disgnosing or treating prostate cancer-associated genes are identifying modulators of prostate cancer as well as for identifying modulators of prostate cancer are particularly useful in gene thereby, as a vaccine or in antisense applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides prostate-specific coding sequences and their encoded proteins. These can be used in the diagnosis and treatm of cancers, particularly prostate cancer. The present sequence is a protein described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New prostate-specific polynucleotides for diagnosing and treating diseases, in particular prostate cancer, and as markers for the progression of cancer.

encoded polypeptides (AAM/8233-AAM/80102) that exhibit activity elating to cycokine, cell proliferation or cell differentiation or which may induce production of other cycokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cycokine-like activities, epittem cell growth factor activity, hamanemodulatory activity and activity, insue growth factor activity, immunemodulatory activity and civity/inhibin activity and may be useful in the disgoses and/or restremen of cancer; leukaemia, nervous system disorders, arthritis and resultance.
                                                                                 Note: Records for SEO ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitred as the relevant pages from the sequence listing were missing at the time of publication.

The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The unleic acid sequences can be used for producing secreted protein. The products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity. Cell transcription and differentiation activity, hashestation and differentiation activity, reproductive hormone cregulating activity, chemotactic/chemotactivity, anti-inflammatory cativity, tumour thibition activity, and activity, anti-inflammatory cativity, tumour thibition activity and activity. An products cativity in the products can be used in forensic, gene therapy and chromosome mapping promoter cative sequences. The nucleic acids encoding the signal peptides can be used for cativities of the products active the nucleic acids encoding the signal peptides can be used for cativity and activity activity and activity. The activity and activity and activity activities activity activity and activity and activity and activity activities activity. The activities activity activities activitie

KIM proteins can be administered therapeutically compressing till encoding polymicalcotides, to promote growth and/or survival of damaged tissue (e.g. renal tissue), since the KIM proteins are upregulated in injured or regenerating (especially renal) tissues. KIM fusion proteins, conjugates, antibodies and vectors can also be used therapeutically, e.g. these or the KIM proteins may be included with an ecceptable carrier in pharmaceutical compositions, useful for therapy. C prophylaxis of conditions associated with disfunction/disregulation of the composition of the compositions are repeated with disfunction of the composition of compositions are repeated with disfunction of the composition of compositions are repeated with disfunction of the composition of compositions are sequences which, when composition in humans (e.g. condistrupt expression of a cellular KIM gene internalised into cells, can disrupt expression of a cellular KIM gene into growth) or compositions. The proteins and polymulations are useful diagnostically e.g. to block the growth of tumours dependent on KIM for growth) or abnormal responses to tissue injury (indicative of increased risk, or presence of, an autoinamer response or abnormal tissue growth arising from affecting renal tissue). The proteins can calso be used to locate KIM-producing cells (especially specific loci, cells tissue masses abnormally producing/easy respecially specific loci, cells inspecially english with an according to the composition of tissue and the sum of the composition of the composit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

cc polymeptide (II) sequences (II) is useful as hybridisation probes, cc polymerses chain reaction (PCD) primers, oligomers, and for chromosome can gene mapping, and in recombinant production of (II). The polymerses can be useful in deposition of (II). The complex complex can be useful in gene therapy techniques of ridentifying expressed genes. (II) is useful in gene therapy techniques (II) in the complex can be useful in gene therapy techniques (III) in the complex can be useful for generating antibodies against the detecting of comparities and the production of the services of the services are useful in medical can service as food supplement. (II) and its binding partners are useful in medical consisting of sites expressing (II). (II) and (III) are useful for treating disorders involving aberrant protein expression or biological activity of the polymeptide and polymulectide sequences have applications in consisting for the sequences, where mapping identification of materions are responsible for generic disorders or other traits to assess biodiversity assimply produce other types of data and reducted dependent on DNA and canino acid sequences of their thoughton. The suppose of the comparation of the printed specification, but was obtained in electronic format directly from NIPO

   Pred: No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score
